NetVault® Plus for Oracle

Award-winning protection for business-critical data
stored in Oracle databases

Protecting business-critical data stored in Oracle databases while keeping that data online and available is easier when you have a solution with a plug-in specifically designed for Oracle. With Quest® NetVault Plus, you'll be able to take full advantage of the world's leading relational database management system.

NetVault Plus gives you confidence that you can recover your Oracle environments, including Oracle Real Application Clusters (RAC) and Data Guard, while eliminating the need for complex scripting. Through an intuitive user interface and automated workflow processes, NetVault Plus offers a centralized console to help you set up, configure and define backup and restore policies for all your Oracle databases. Plus, you have the flexibility to select your preferred backup method without having to learn Oracle database internals, thanks to support for online backups via simple user-managed or full-featured Recovery Manager (RMAN) backups. NetVault Plus also offers granular control that minimizes downtime, providing you with faster and more reliable backups and restores of complete databases, individual tablespaces or individual datafiles. Through automatic integration with a wide range of backup devices, you can be confident that your Oracle data is protected and safely stored off site to meet your disaster recovery and business continuity goals.

NetVault Plus supports important features such as Oracle RAC, Data Guard, Automated Storage Management (ASM), Flashback Database and Transparent Data Encryption, and offers you advanced backup and recovery options in case of hardware failure or data loss. Protect your business-critical Oracle data with confidence and agility.

Benefits

- User-managed or RMAN-based online backups
- Support for RMAN compression
- Protection for single-instance, multi-instance RAC and Data Guard environments
- Protection for Oracle data in third-party (non-RAC) clustered environments
- Backup Parameter, Control, Archived Redo Log Files and External Configuration Files
- Protection down to datafile levels
- Automatic instance configuration
- Point-in-time restore capable, using SCN and log sequence number
- Reduced backup storage requirements and cost
- Backup immutability for ransomware protection
- Offsite replication for disaster recovery
- Point-and-click graphic user interface (GUI)

NetVault Plus also provides critical data protection features like backup immutability and encryption for ransomware protection, along with market-leading global data deduplication to reduce backup storage requirements and costs in the datacenter and in the cloud. Additionally, it delivers backup replication for disaster recovery readiness and cloud-tiering for long-term data retention in the cloud.

Key benefits

Reduce risk with flexible backup and recovery — NetVault Plus gives you tools to simplify backup and recovery of business-critical Oracle databases. With NetVault Plus, you can create a comprehensive and flexible backup policy without the need to understand Oracle database internals. You have the flexibility to choose between simple user-managed or full-featured RMAN-based backups. Through point-and-click automated options, NetVault Plus reduces reliance on human interaction, which eliminates syntax errors caused by manual intervention.

Minimize downtime by speeding up restores (restore only what is needed) — NetVault Plus ensures databases remain online and fully accessible during backup operations, ensuring no user downtime. Integration with Oracle's Flashback Database maximizes availability by enabling you to rewind to a previous time to correct problems caused by logical data corruptions or user errors without restoring physical datafiles. When needed, you can perform full, incremental, and time-, SCN- and log sequence number-based, point-in-time restores. NetVault Plus is designed for granular recoveries, enabling you to recover complete databases, individual tablespaces or individual datafiles.

Experience granular control that minimizes downtime. NetVault provides you with faster and more reliable backups and restores of complete databases, individual tablespaces or individual datafiles.

Gain ransomware protection and recovery —

NetVault Plus protects both your primary data as well as backup data against ransomware. You get backup immutability and encryption for backups.

Reduce backup storage costs — Plus provides powerful data deduplication and compression to reduce backup storage requirements and costs on-premises and in the cloud by 90% or more.

Wide support for broad set of storage devices —

With off-site backups being an important part of the data protection plan for business-critical applications, NetVault Plus integrates with a wide range of storage devices, enabling you to store backup data on disk, object storage in the cloud, tape, and in a virtual tape library (VTL).

System Requirements

Oracle versions

Oracle 11.1, 11.2, 12.1, 12.2, 18c and 19c

Oracle platforms

Linux
Windows
Solaris
AIX
HP-UX

Oracle RAC platforms

Linux
Windows
Solaris (SPARC)

About Quest Software

Quest Software creates technology and solutions that build the foundation for enterprise AI. Focused on data management and governance, cybersecurity and platform modernization, Quest helps organizations address their most pressing challenges and make the promise of AI a reality. Around the globe, more than 45,000 companies including over 90% of the Fortune 500 count on Quest Software. For more information, visit www.quest.com or follow Quest Software on [X \(formerly Twitter\)](#) and [LinkedIn](#).
