# Skills 101:erwin DM

## Episode 4

# Designing Data Structures with Intelligence

Andy McGovern

Sr. Principal Consultant
erwin DM

andy.mcgovern@quest.com

Quest
Where Next Meets Now.

# Erwin DM: Now More Powerful

At the core of the Workgroup Edition is the **Mart Portal**, a suite of features designed to enhance collaboration and control:

- **Model Access Controls**
- **Automatic Versioning**
- **Collaborative Modeling**
- **ER360 Web Portal**

With these tools, you can start with your baseline models and easily adapt them as your technology needs evolve—making your workflow more flexible, efficient, and aligned with your team's goals.

Quest
Where Next Meets Now.

# Agenda

- Generating DDL from a Physical Model
- Using Complete Compare for Impact Analysis & Script Generation
- How Automatic Versioning Works
- Centralized Active Model Templates for Standards Enforcement

Quest
Where Next Meets Now.

Logical
This is a diagram presenting all the data elements as established by business personnel during the data requirements phase for YOUR SYSTEM. These entities, attributes and their definitions describe what the business identifies as the data requirements needed for this system. As changes are needed, any additional data requirements or other business data changes are applied to the application, this diagram will be updated to reflect these changes.
Target Audience: Business Personnel

Overview
Welcome to the Forward Engineer Wizard. This wizard lets you forward engineer a model.
Forward engineering is the process of generating the physical database schema from a physical model. You use the Schema Generation wizard to forward engineer a model and generate the schema. The schema that you generate includes all options that are supported in your target server. You can customize the generated schema for your target server using features in the Schema Generation wizard.
The Option Selection page lets you customize the Schema Generation option set and the database template.
The Summary page lets you review the selected Schema Generation options in a hierarchical tree structure. The page also lets you enter a comment for the current Schema Generation option set.
The Owner Override page lets you enter the owner override name of an object group. The object group and name you indicate override the owner name assignment for that object group in the model.
The Object Filter page lets you select a subset of the objects in a model for forward engineering.
The Preview page lets you preview the schema DDL script generated for the current model.

Overview
Welcome to the Forward Engineer Wizard. This wizard lets you forward engineer a model.
Forward engineering is the process of generating the physical database schema from a physical model. You use the Schema Generation wizard to forward engineer a model and generate the schema. The schema that you generate includes all options that are supported in your target server. You can customize the generated schema for your target server using features in the Schema Generation wizard.
The Option Selection page lets you customize the Schema Generation option set and the database template.
The Summary page lets you review the selected Schema Generation options in a hierarchical tree structure. The page also lets you enter a comment for the current Schema Generation option set.
The Owner Override page lets you enter the owner override name of an object group. The object group and name you indicate override the owner name assignment for that object group in the model.
The Object Filter page lets you select a subset of the objects in a model for forward engineering.
The Preview page lets you preview the schema DDL script generated for the current model.

Overview
Welcome to the Forward Engineer Wizard. This wizard lets you forward engineer a model.
Forward engineering is the process of generating the physical database schema from a physical model. You use the Schema Generation wizard to forward engineer a model and generate the schema. The schema that you generate includes all options that are supported in your target server. You can customize the generated schema for your target server using features in the Schema Generation wizard.
The Option Selection page lets you customize the Schema Generation option set and the database template.
The Summary page lets you review the selected Schema Generation options in a hierarchical tree structure. The page also lets you enter a comment for the current Schema Generation option set.
The Owner Override page lets you enter the owner override name of an object group. The object group and name you indicate override the owner name assignment for that object group in the model.
The Object Filter page lets you select a subset of the objects in a model for forward engineering.
The Preview page lets you preview the schema DDL script generated for the current model.

erwin Data Modeler
The target server change was made on a model loaded from Mart.
Versions of a model with different target servers cannot be merged, which may lead to cancelled changes.
To avoid this, obtain a lock on the model.
